

OFFICE SETTING EARLY INTERVENTION

The Client

A large pharmaceutical company with 1,600 employees working in an office setting.

The Challenge

The office setting provokes more injuries than any other work environment. In our client's case, the administrative department had the **highest Total Recordable Incident Rate (TRIR)** in their company – and the rate was climbing.

KEY OUTCOME

54%
reduction in TRIR

Our Solution

Our Certified Early Intervention Specialists (CEISs) worked with our client to identify and address the risks stemming from sustained posture and repetitive movements. We identified the root causes, eliminated them and provided the appropriate care.

We utilized the following to ensure long-term injury reduction:

Ergonomic work station analysis and improvement

Stretching program and postural job coaching

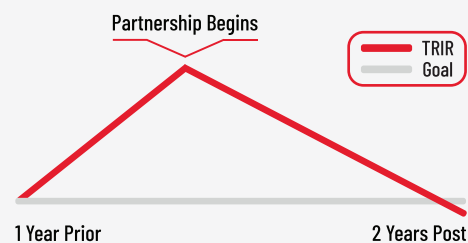

First aid care and efficient referral when necessary

Our Impact

Over two years, our team reduced the TRIR by **54%**, surpassing our client's goal. We **continue to support their operations** throughout the United States with CEISs and Ergonomic Specialists.

Total Recordable Incident Rate (TRIR)
