

# ROLLING AWAY UNNECESSARY RECORDABLES

## The Client

A tire manufacturing company with roughly 1,000 union employees who work varied shifts.

## The Challenge

When on-site injuries occurred, our client would either send the affected employees to the local occupational health clinic or the emergency room. As a result, our client was experiencing an **abnormally high number of OSHA Recordables**.

## Our Solution

Our Certified Early Intervention Specialists (CEISs) worked with our client to resolve an average of about 80% of employees' injuries on-site, using only first aid – compared to only 10% being remedied with first aid prior to our team being brought on.

## KEY OUTCOME

# 35%

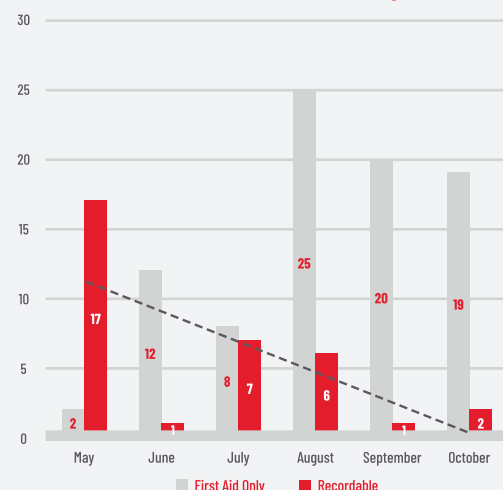

reduction in on-site  
Recordable Injuries  
in the first quarter

## Our Impact

In the first quarter alone, our team **reduced Recordable Injuries by 35%**.

In the months that followed, our team continued to help our client keep their Recordable Injuries low by utilizing on-site first aid.

First Aid vs. Recordable Injuries
