

# ON-SITE INTERVENTION DELIVERS POWERFUL RESULTS

## The Client

An electrical manufacturing company with roughly 350 union employees who work one primary shift.

## The Challenge

As our client's business grew, so too did their injury rates. When on-site injuries occurred, our client would send the affected employees to outside providers based on the operations team's discretion. As a result, our client experienced a **high number of workers' compensation claims**, a **high DART Rate** and a **high TRIR**.

## Our Solution

One of our Certified Early Intervention Specialists (CEISs) worked with our client to triage most employee injuries on-site, using only first aid. Our CEISs also reduced our client's avoidable hazards through proper root cause analysis and mitigation.

## Our Impact

Over the course of four years, our team **consistently lowered** TRIR, DART Rate and workers' compensation payments by utilizing on-site first aid provided by our CEISs.

## KEY OUTCOMES

**70%**

reduction in TRIR

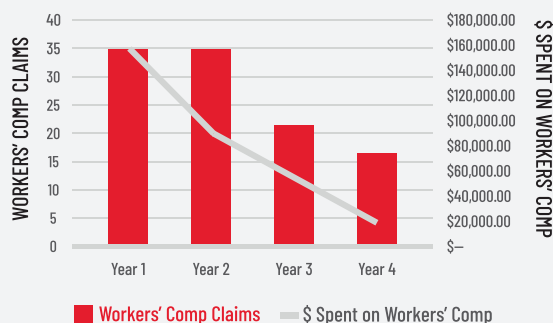

**76%**

reduction in DART Rate

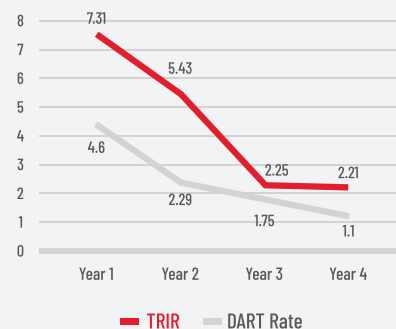

**91%**

reduction in workers' compensation payments

## Workers' Comp Claims & \$ Spent

## DART Rate and TRIR

**CONTACT US at (844) 465-7738 to see how we can help you reduce and mitigate risk in the workplace.**
