

REMOVING RECORDABLES AND DEMOLISHING HIGH CLAIM COSTS

The Client

An equipment manufacturing company with nearly 1,000 union employees who work varied shifts across three business units.

The Challenge

When on-site injuries occurred, our client would either send the injured employees to an on-site occupational health clinic or an off-site occupational health clinic when an on-site provider was not available. Their reactive approach to injuries combined with delayed reporting caused an **increase in soft tissue OSHA recordables and high workers' compensation claim costs.**

Our Solution

One of our Certified Early Intervention Specialists (CEISs) began promoting early discomfort reporting with employees through our boots-on-the-ground approach. Talking to employees on the production line allowed the CEISs to learn about the physical demands of the job and employees' concerns.

Our Impact

Over the course of two years, our CEISs helped to **reduce soft tissue OSHA recordables and greatly lowered workers' compensation claim costs.**

KEY OUTCOMES

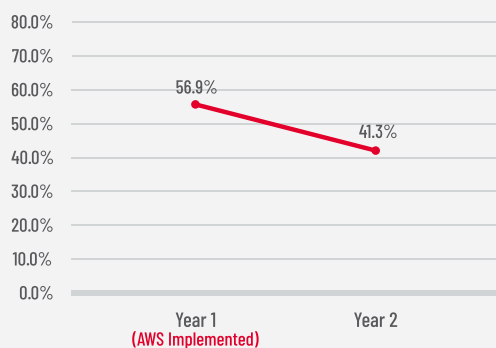

25%

reduction in soft tissue OSHA recordables

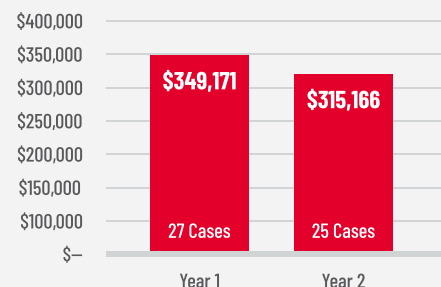

\$664,000

cost avoidance in workers' compensation claim costs

% of Soft Tissue OSHA Recordables

First Aid Cases and Corresponding Cost Avoidance
